LF Networking and OCP Partner to Jointly Enable SDN and NFV Transformation

- *Collaboration across open hardware and software to enable full open source stacks*
- *Expanded integration and test of OCP hardware with OPNFV*
- *Harmonization across disaggregated hardware with Switch Network Operating Systems*

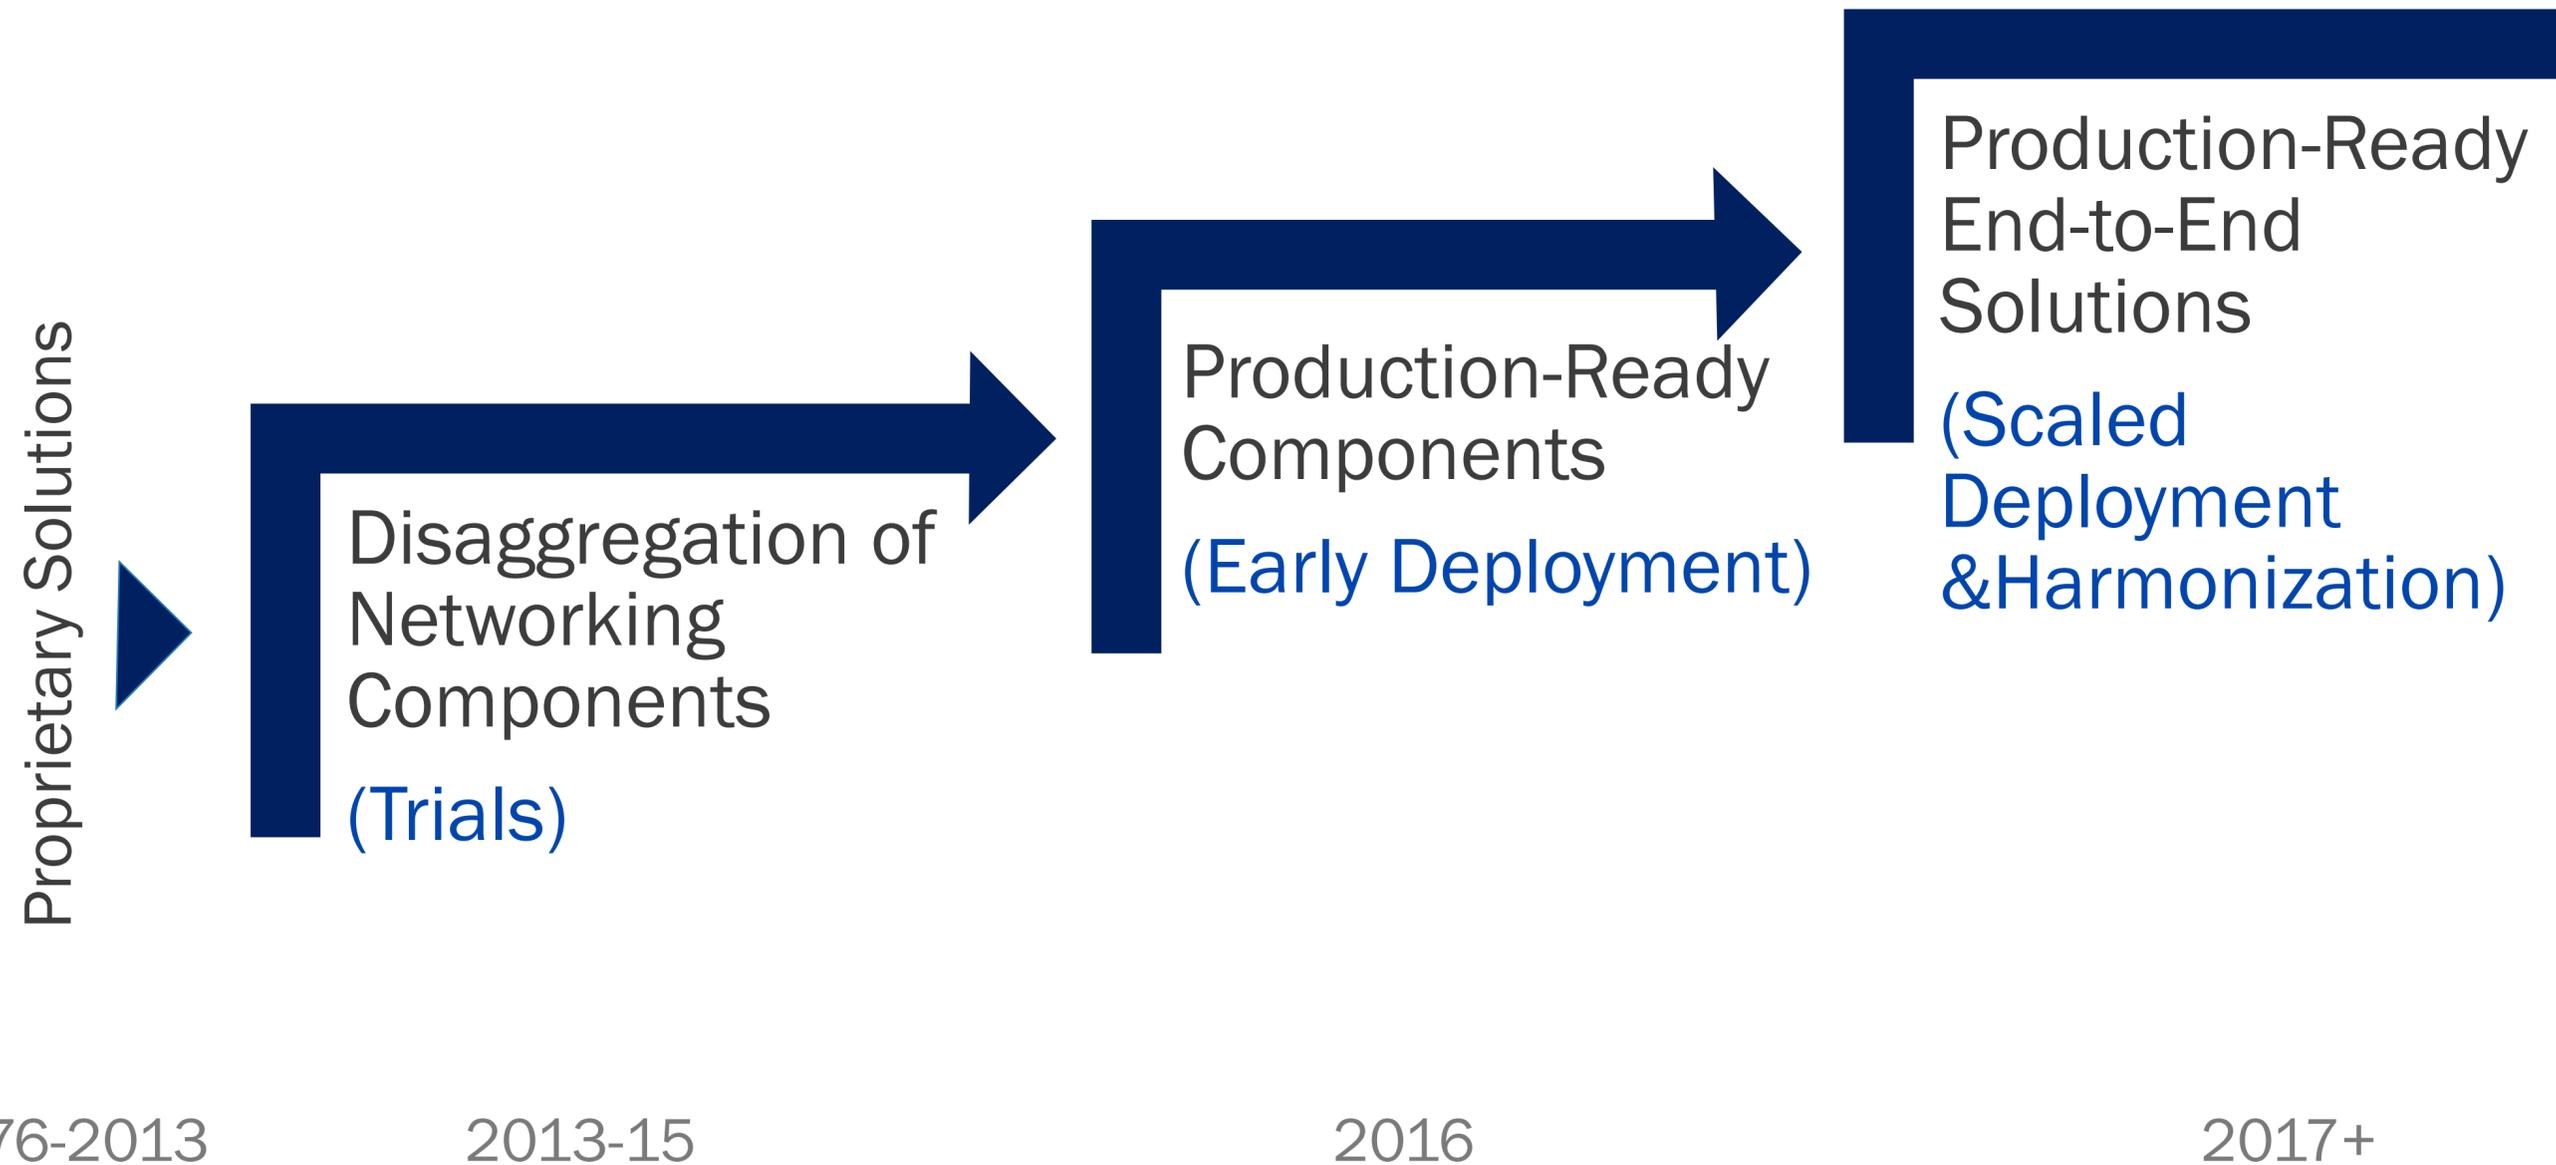

SAN JOSE, Calif. (OCP Summit), March 20, 2018—[The Linux Foundation](#) and the [Open Compute Project](#) (OCP), a collaborative community focused on redesigning hardware technology to efficiently support the growing demands on compute infrastructure, today announced a joint collaboration to further the development of software- and hardware-based open source networking. The organizations will work together to create stronger integration and testing, new open networking features, more scalability, a reduction in CAPEX/OPEX, greater harmonization with switch network operating systems, and increased interoperability for network functions virtualization (NFV) network transformation.
